

Applied Biometrics GmbH collaborates with UPEK, Inc.

Digital privacy just became a little simpler: Applied Biometrics GmbH and UPEK, Inc. are now working in collaboration with the inclusion of UPEK's Eikon Digital Privacy Manager into Applied Biometrics' assortment for sale starting June, 1st 2009.

In times of an increasing dependence on computers and the Internet, the modern consumer gets easily lost in a jungle of security ports that all require different cleverly-devised passwords. New technologies evolve daily, raising the threat to personal data security. Applied Biometrics aims at bridging that security gap by providing its customers with more simplicity and comfort in every day life.

With the Eikon Digital Privacy Manager, Applied Biometrics GmbH assures exactly that. In protecting his digital privacy, the customer is now freed from clumsy and time-consuming passwords. UPEK's Eikon Digital Privacy Manager replaces the user's passwords with a single swipe of his own unique finger. A small sensor pad recognizes the fingerprint, providing an easy and secure way of accessing his PC or Mac. It is simply installed and includes the Protector Suite software for PC or Mac which allows the user to just plug the Eikon into his USB port, swipe and go.

About Applied Biometrics:

Applied Biometrics GmbH stands for long-time experience in information and biometric technologies such as fingerprint, face and voice recognition. Integrated in a worldwide network of experts, Applied Biometrics operates on the cutting-edge of scientific development in the digital security field. As a specialist in biometric security, the company provides hardware and software components for industrial and public customers. It is strictly independent from any hardware or software vendor.
